

**How I increase page speed for
<https://sudharmalab.com/>**

I improved Sudharmalab's website speed by installing the LiteSpeed Cache plugin, a popular WordPress performance tool. I configured advanced caching, minimised CSS and JavaScript files, and optimised overall site performance to deliver faster load times and a smoother user experience.

What i do

- Page caching for faster load times
- Browser caching to store static files on users' devices
- CSS, JavaScript, and HTML minification
- CSS and JavaScript file combination
- Lazy loading for images and iframes
- Image optimization and compression
- WebP image conversion for better performance
- Database cleanup and optimization
- Object caching (Redis / Memcached support)
- Delaying JavaScript execution
- Heartbeat control to reduce server load
- Mobile-specific caching
